

## University of Auckland

# **BUILDING 405**

### Project Profile

#### **PROJECT SUMMARY**

New 13 level building that provided under-graduate teaching spaces, post-graduate laboratories and offices for Faculty of Engineering staff which is attached to the existing B401/402 building that remained occupied during the build. A smoke extraction system was installed to prevent smoke spread from the multi-level atria.

Fire design developed in accordance with the C/VM2 framework.

#### **CROSSFIRE VALUE TO PROJECT**

Crossfire developed a performance-based design to allow the large open atria in the existing building to be connected to the existing building.

We developed the fire design to the C/VM2 framework using FDS fire modelling which resulted in a flexible open learning environment for large numbers of occupants far beyond what would be required by an Acceptable Solution design.

#### Client

University of Auckland

#### Architect

Jasmax

#### Date

Completion March 2020

#### **Project Value**

\$22m
